Experience

Frappe Nov. 2025 – Present

Software Engineer *Remote*

- Part of the Frappe Cloud team, taking care of the platform/infrastructure layer. Currently building Inference Cloud(Grove) and AI gateway(Pathway) as brand new offerings/parts of the cloud.
- Designed and implemented proxy failover using static/floating IP and tcp streaming (using NGINX).
- Removed the need for public IPs across our fleet of servers, using NAT instances, reducing our cloud costs by $55k+ annually.
- Implemented auto-archival of servers for non-paying teams, saving around $2k/month.
- Implemented ZFS filesystem and snapshotting mechanism (with S3 streaming) to commonify snapshotting mechanics across all cloud providers.
- Designed auto-scaling architecture using AWS EFS (shared storage) and NGINX (load balancing), ensuring reliable background jobs and Socket.IO via primary-secondary routing.

CitiXsys Feb. 2024 – Nov. 2025

Software Engineer *Noida, India*

- Part of the iVendNext team, leading cloud initiatives, helping build and manage iVendNext Cloud.
- Built DevContainers for Cloud for enabling development from the browser.
- Implemented a service for autostopping/starting containers for non-critical workloads based on requests, optimizing server resources and cost.
- Introduced Point Of Sale (POS) Authentication Mechanisms using QR, MSR and Biometric devices.
- Implemented POS Customer Display streaming using websockets (Socket.IO).
- Facilitated UAT environment creation from live/production site for allowing partners/customers to test new updates, additional apps, etc safely.
- Implemented Licensing Engine (on cloud) to manage customer site quotas, with automated auditing mechanisms.
- Built an AI Bot Framework using OpenAI's APIs for building bots & functions, making it easy for users to interact with the system. Built a Custom Chatbot Interface for the same.
- Contributed to the development of a RAG-based chatbot service designed to handle specific queries, translating natural language into SQL, and providing product how-to guidance by referencing product documentation.
- Implemented CI/CD pipeline(s) using GitHub Actions to automate application release cycles, enhancing deployment efficiency and reliability.

Frappe Sept. 2021 – Jul. 2023

Software Engineer *Remote*

- Core (Backend) Maintainer/Developer of the Frappe Framework, owned and scaled Database & Email modules.
- Introduced OAuth based authentication for email (IMAP, POP & SMTP) client in the framework.
- Proposed & Implemented architectural changes like removing additional Redis instance(s), which helped in simplifying deployments.
- Enhanced efficiency and throughput of background processes through multi-queue consumption. Reduced (base) memory consumption of background workers by 25% by optimizing import paths.
- Acted as trainer for the Frappe Developer Certification, twice, training 50+ people whilst having a direct revenue impact(upwards of $25k).
- Reviewed more than 300 PRs, helping increase the test coverage of the framework from 50% to 68%.

Projects

Key-Value Store with Raft consensus *(Java)*

- Implemented an at-most-once Key Value store based on the Raft consensus algorithm.
- Implemented Leader Election, Log Replication and Log Compaction.

Technical Skills

Languages: Python, Golang(Go), SQL
Frameworks: Flask, Frappe
Tools: Git, Docker, Ansible, MySQL/MariaDB, Redis, Shell Scripting, Github Actions

Education

Georgia Institute of Technology Jan. 2024 – Present
Master of Science (MS), Computer Science *Remote*

Bennett University Jul. 2017 – Jun. 2021
Bachelor of Technology, Computer Science and Engineering *Noida, India*
